

List #8 water cycle:

1. **Water cycle**-the continual movement of water among Earth's atmosphere, oceans, and land surface through evaporation, condensation, and precipitation.
2. **condensation**- the process by which molecules of water vapor in the air become liquid water
3. **precipitation**- any form of water (rain, sleet, snow, hail) that falls from clouds and reaches Earth's surface
4. **evaporation**- the process by which water molecules in liquid water escape into the air as water vapor
5. **transpiration (evapotranspiration)** when plants release water through tiny holes in their leaves.
